

Can be set to a pressure and open automatically when exceeded. When valves on pumps, dividers or branchpipes are opened or closed too abruptly, as well as through excessively fast water input, pressure shocks (water hammers) occur in the hose line. These may amount to several times the operating pressure and damage hoses, pumps and fittings. Pressure relief valves absorb these pressure shocks quickly and safely.

Pressure relief valves spring operated

3305 A

For mounting on ball valve dividers and intake valves. Adjustable with Allen Key on:

Style 3305 A:
7/10,5/14 bar (100/150/200 psi)

Style 3305 B:
5,25/7/8,75/10,5/12,25/14/15,75/17,5 bar
(75/100/125/150/175/200/225/250 psi)

3305 B
