

Pressure valves for fire fighting pumps

Shut-off device for pressure outlets of fire fighting pumps. Open and shut by turning the handwheel. Designed as non-return valve which is actuated by the pump. It closes during priming and opens automatically as soon as pressure is built up. Also operating during brief stops of the pump. After the lock on the valve neck has been released, the non-return operation is stopped and the valve can be completely opened.

- Aluminium alloys (A)
- Copper alloys (C)

B-type pressure valve "Servo" PN 25

6002

With the version "Servo" the valve disc is hydraulically balanced. The torque required to close the valve against the pump pressure is considerably reduced.

6003
